

[WEB]SITE MAPPING

INTERNET STUDIO
Cassini Nazir

Here is a website that was created by a previous Internet Studio 1 student, Megan Edwards. You can visit her website at thesingleplate.com. We will examine how she created this site.

The Single Plate
delicious

essentials grocery lists recipes blog about contact

Welcome

The Single Plate is designed around 4-5 simple easy to use recipes each week that correspond with the weekly grocery lists

one knife, one pan, one person, one plate.

What's on TV?

So people always ask me if there are any chef's I watch on TV and more often it is even a bit more direct. "Do you ever watch Kitchen Nightmare's with Gordon Ramsey, do chefs really act like that?" From there my answer is pretty standard, "No I don't watch the show, and yes some chefs really act like that, but so do some accountants and dentist"

Cheese... Holy Cow!

Let me first preface this post with a simple statement, I am a big fan of cheese, so much so I believe it should be its own food group or at least should be considered as meal in and of itself. The idea this week was fairly simple, I wanted to explore the wonderful world of cheese and then share some tasting notes with you. So when I tell you that I stumbled upon the best soft cheese I have ever eaten while tasting to be able to write this post, it might seem like something of an exaggeration, but I take cheese seriously and this my friends is no exaggeration. (more)

Twitter updates

Why has #TopChef made me laugh more than any TV this week? Maybe I miss being a chef? Hurry back @nbc30rock... I need to laugh more. - 7 days ago

Drunken goat cheese and a glass of wine, not sure if a girl could be more content. - 2 weeks ago

Trying to add new juice to TheSinglePlate.com for spring, tweet me back your favorite single serving recipes. - 3 weeks ago

Lemon Juice

Tonight I have a quick post that came to mind when I was trying to utilize a large amount of lemons and limes before they went bad. I had

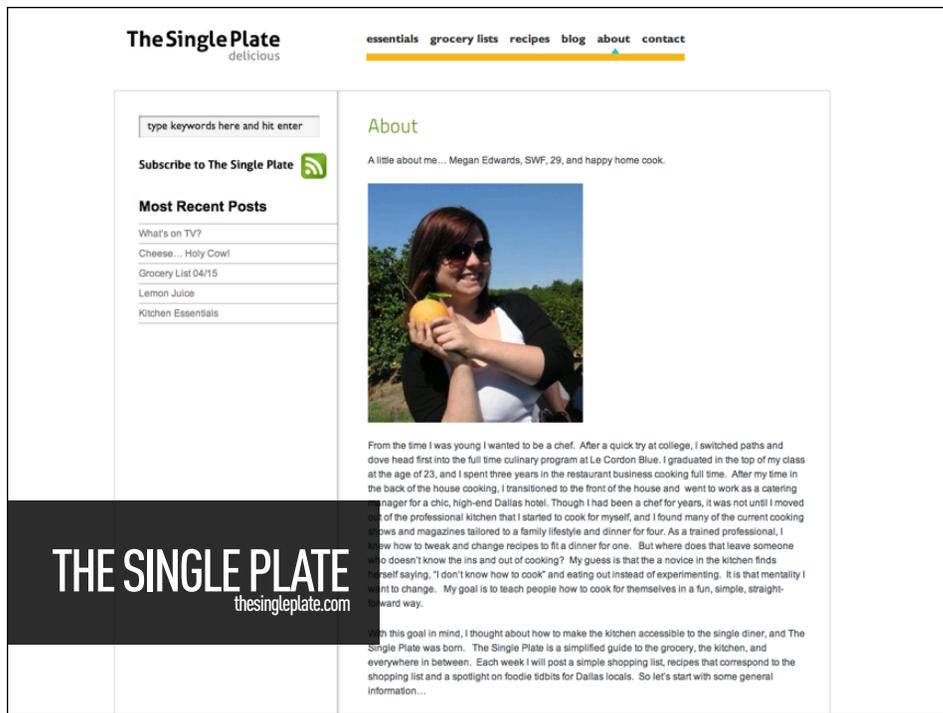

Kitchen Essentials

Maybe this is something that I should have mentioned before now, but I thought it would be helpful if I told you about the general kitchen

A sitemap gives an aerial view of your website. It indicates content not design. In other words, it suggests only what content will be on your website, not a design for your website.

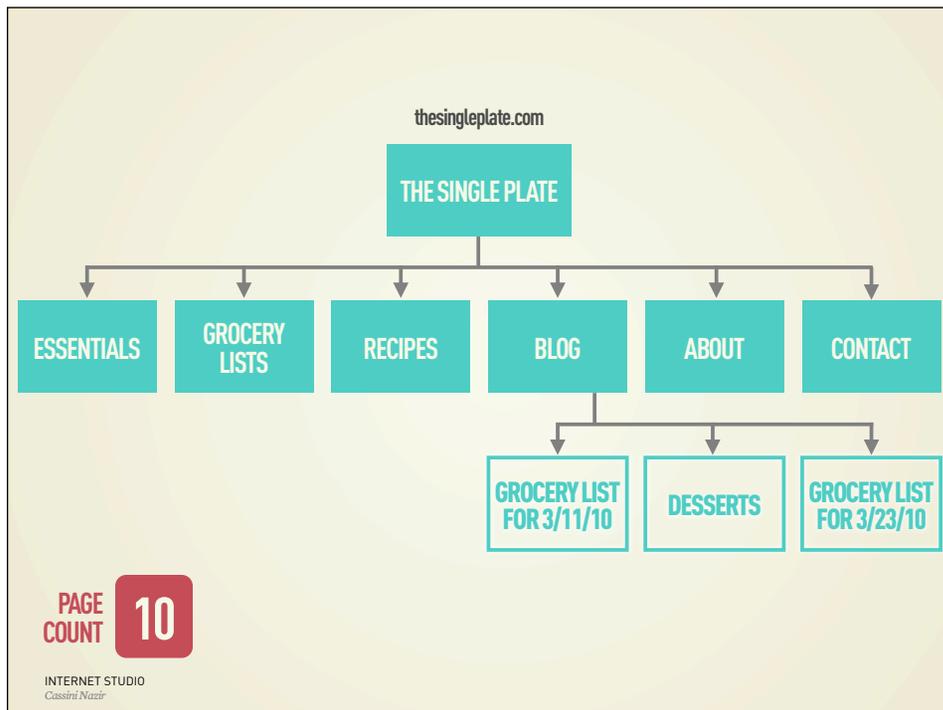

The home page for the website is where you will start.

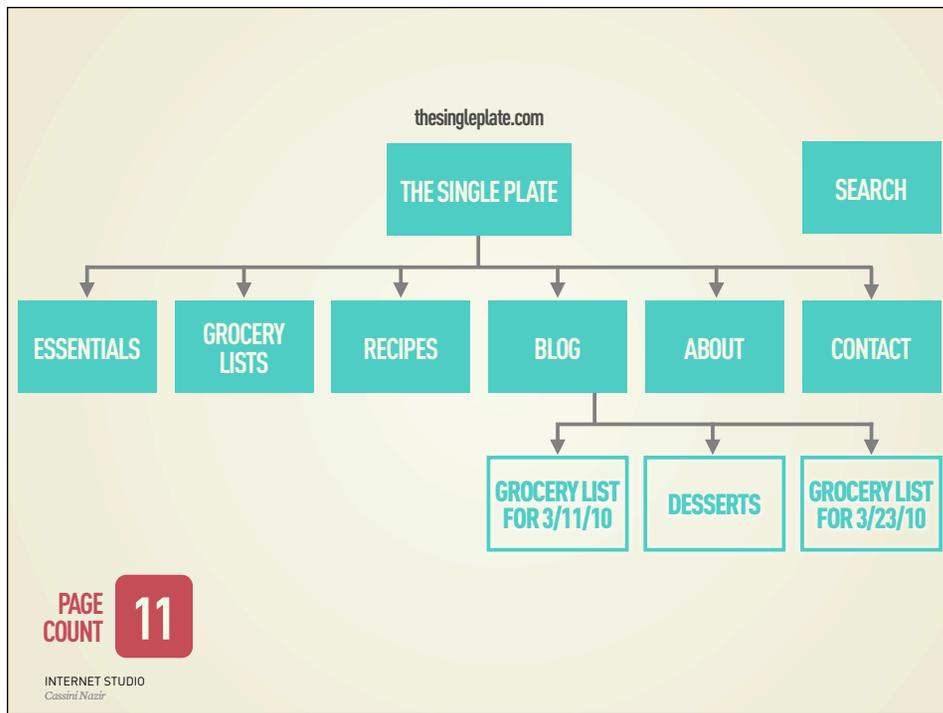

Here are the main sections that Megan decided were important to have on her website. Notice that she decided to include a blog, which feeds content to the Grocery Lists and Recipes portion of her website. These pages are dynamic, the content that appears on them changes as new posts gets added.

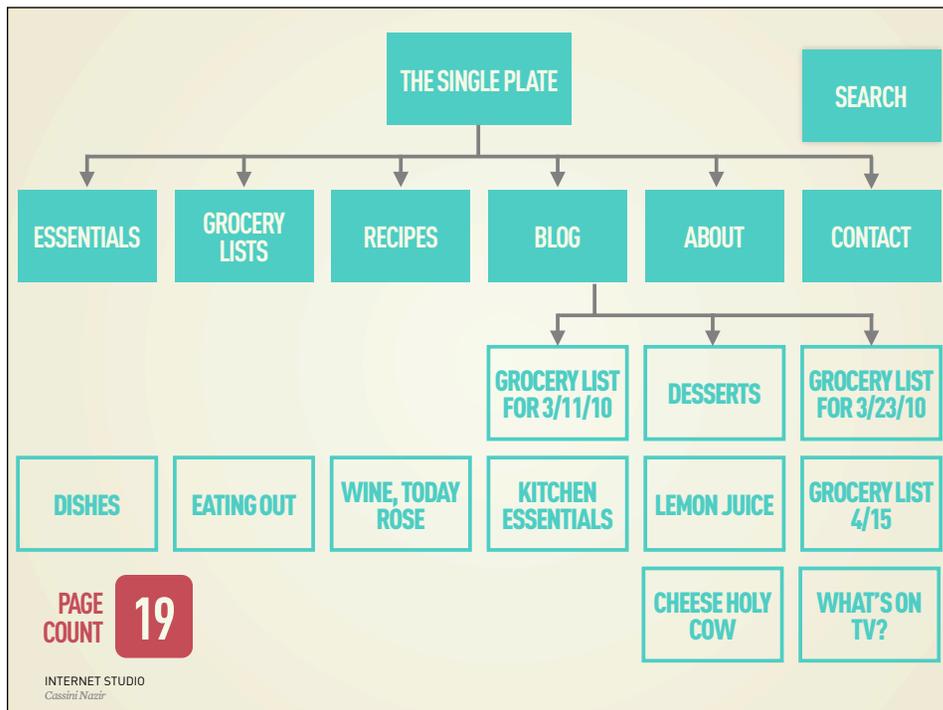

The other three pages (Essentials, About and Contact) are static pages. The content on these pages change very infrequently.

These are the pages Megan decided to launched with.

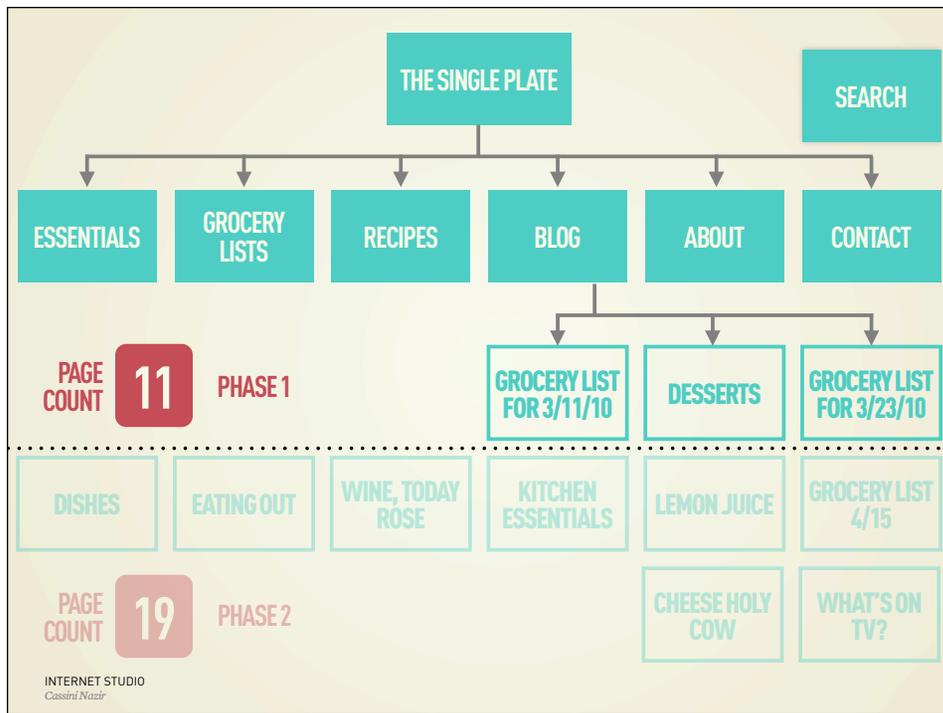

Oh, and don't forget your search results page. Search is another form of navigation. Almost every website includes a search box, but we want to remind ourselves (and your client) that you will have a search box on your website.

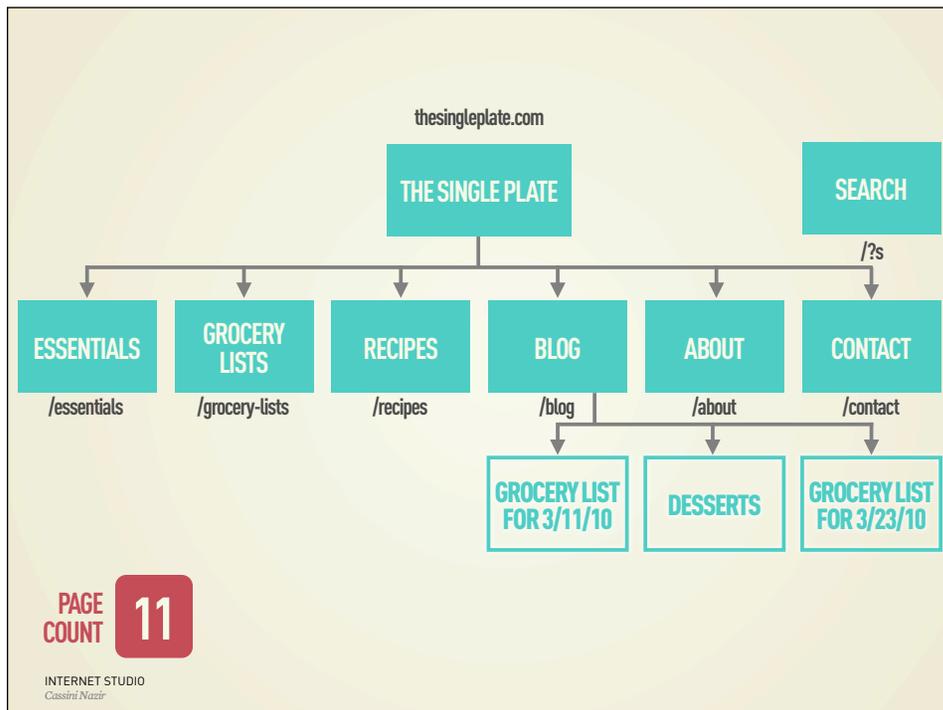

By the summer her website grew to nearly 20 pages.

Your content and sitemap will differ from Megan's but it should have room for growth.

Finally, notice that the sitemap indicates the URLs (Uniform Resource Locators), more commonly called web addresses, of these pages. The web address of the About page will be thesingleplate.com/about. The Grocery Lists page will be thesingleplate.com/grocery-lists. Your site map should include a suggested web address for each of your pages. Keep the following in mind:

- Web addresses should be as short as possible.
- Web addresses should never include capital letters or underscores.

Here is a sample of what your sitemap template will look like. Feel free to edit and adjust as needed.
